Turntable strobe disc · 60 Hz mains

Under a lamp on this mains frequency, the ring for your speed stands still when the speed is exact.

Scale check: a bank card or ID card covers this box exactly. If it does not, print again at 100 % ("Actual size").

1. Print at 100 % and check the scale with a card.
2. Cut out the disc and the centre hole; put it on the platter over the spindle.
3. Light it with a lamp on mains power.
4. Watch your ring: still = exact; drifting with the platter = fast, against it = slow.
5. If a 1 % ring stands still instead, the speed is off by that much.
